

HeatLink® Aluminum Heat Transfer Plate for DryAbove™ & DryBelow™ Systems Stk# 87024

This plating is used to provide a direct heat transfer and distribution from the PEX piping to a wooden subfloor. They can be stapled to the underside of the subfloor in a DryBelow™ system or used above the subfloor in a DryAbove™ system. End to end gaps between plates should be from 3" to 6" (75 to 150 mm). Plates measure 24" x 4-1/4" (610 mm x 108 mm).

Comparison of the #87024 aluminum plates to the (discontinued) #87000 galvanized steel plates:

Installation procedures are the same for the previous galvanized steel plates.

To secure the plates we recommend 6 staples.

Noise due to expansion or contraction is not effected by the change of material.

The groove for the pipe is essentially the same.

Other advantages:

- a) reduced weight
 - I) lower shipping costs
 - II) easier to handle
- b) better heat transfer rate
- c) longer plate resulting in fewer plates to handle
(Note: estimating how many heat transfer plates are required is now: area sq. ft. x 0.55)
- d) softer material for easier installation (penetration of staple)
